

Letters from La Hilda Estate
February –June 2009
Sixth Graders from Mr. Juan Diego's Class

From Darling Antonio

On June 20th we had a nice dance party, bingo, food and a lot fun because we celebrate a Catholic event known as Holy Heart day.

I would like to mention that working in the computer lab has been a wonderful experience because I learned many new useful stuff in this course. I would like to refer to some of them such as be able to identify a desktop component like memory card, motherboard and chassis parts. In addition, I am more aware of programs and settings such as installation procedure, Windows XP, Internet and email account.

From Maicol Daniel Sanchez Porras

La Hilda community has had a great party on June 20th. We enjoy a mobil night disco set up place within our school for this special venue. We also had the opportunity to taste local food, play soccer and bingo. Another great part of the venue was the presentation of the school band.

On the other hand, we have worked so great this first half of this year in our computer lab especially with our teacher Mr. Juan Diego who has taught us how to fix computers, to recognize the different part of it and many other useful things. We also learned to set up and use the email and more important to use different anti virus and ad-wares software.

From Rosalia and Karla

We are so pleased to study in La Hilda School and also able to live within the coffee farm. We are also glad to be part of different celebration such as dancing parties organized by the school. I would like to add that we lean a lot with Mr. Juan Diego the computer lab teacher. Among other subjects we learned how to handle my email account, fix some major problems in the hardware, install and use anti virus programs and manage windows settings among other.

I would like to add that Mr. Juan Diego was a wonderful teacher. Finally, I would like to say that our school has improved the cafeteria facility and its food as well.

From Luis and Mainor

Our community is big and beautiful; we enjoy having a soccer field, an school, a church, a community room where the party was held on June 20th. At the school we have learned a lot. In addition, our school has a nice facility with a nice cafeteria, two classrooms and a computer lab. The area that I enjoy the most within the school is the computer lab because we learn to identify the hardware parts of a computer, to fix a hard drive, managed operating systems and learn how to manage Windows program.

From Jarelys Solano Garcia

I would like to start saying that I am very happy for belonging to this school. I am also excited because my mother would have a little brother on August, so she will have a little brother.

La Hilda is beautiful; I enjoy so much walking around with my sister at the school nearby. I would like to add some comments about my school, it has a nice computer lab as well as a nice teacher called Mr. Juan Diego.

We learned a lot with him specifically regarding computer hardware maintenance and software as well. We learned how the binary system works and how to tweak windows settings among other things. Finally, I would like to mention how happy and fortunate I feel to have a teacher like Mr. Juan Diego.
